Re: Restrictions on Hazardous Substances (RoHS) compliance

Per requirements of the above EU directive, this will confirm that The Harris Products Group soldering and brazing alloys, Fluxes for soldering, brazing and welding, welding alloys including Flux core and metal core alloy filler metals and Speed Flux do not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBBs) or polybrominated diphenyl ethers (PBDEs).

This applies to all categories of brazing and welding filler metals including; silver brazing alloys, phos-copper brazing alloys, aluminum welding alloys, steel welding alloys, and copper base welding alloys.

This does not apply to lead alloy solders.

Robert M. Henson
Technical Director
